

HP

e-PC 42

HP looked to reinvent the desktop PC as a smaller, simpler and easier to service device so as to further improve maintenance and reduce the total cost of ownership. About the size of a dictionary, the HP e-PC 42 was designed to fit almost anywhere in an either a horizontal or vertical orientation. With its optimized layout and innovative design, the HP e-PC with only four modules – memory, hard disk drive, system chassis, and external power supply, brings serviceability to a new level of plug & play. It is an IT system managers dream when required to swap out parts.
