

## Johnson Controls

Ambient sensor & controller - simplifying complexity

The Johnson Control project team aspired to have one sensor unit to work across their global platforms. In order to understand the requirements of HVAC stakeholders on two continents, extensive user research was carried out in cities across Germany, Italy, the UK, and North America. The contemporary aesthetics and intuitive user interface for this family of ambient sensors has made its award-winning design one of the most highly coveted in the global HVAC market.

Winner of the  
2004 JCI Internal Merit Award
