Dico Vision Industrial C-Mos camera

The Dico Vision camera was developed in response to Systems Electronics growing automated manufacturing and logistics business. The company sought to develop their own C-Mos camera based on proprietary electrical and optical technology so as to better suit their needs in demanding industrial applications. The Dico Vision camera was designed keeping in mind the requirements for low cost manufacturing, assembly and the creation of an extended range of products. Behind the high quality aesthetics is a WiFi compatible IP67 compliant device with a particularly robust construction and which is designed to withstand long term use in harsh industrial applications.
